FOR IMMEDIATE RELEASE:

Velcon Filters, Inc. coalescer I-420MM the first to pass MIL-PRF-52308J

Colorado Springs, CO – Velcon Filters, Inc., an industry leader in the fuel filtration market, announced today that its coalescer I-420MM passed the US Army's MIL-PRF-52308J requirement. Successful testing was conducted by Southwest Research Institute, an independent test facility, per TACOM of Warren Michigan, to the requirements of MIL-PRF-52308J. Tests included single element test and full-scale test. These tests evaluated the solids and water removal properties of the I-420MM filter/coalescer and Velcon's associated SI-522 separator canister. An additional performance test was conducted after shock and extreme environmental exposure.

The "J" version of MIL-PRF-52308 is based in large part on the commercial API/IP 1581 5th Edition filter/separator test specification. This upgrades the filter/coalescer to a higher performing design and removes the historical tie to MIL-F-8901 performance requirements.
